- (A) Improved nutritional formulation for the treatment of renal disease.
- (37) A novel nutritional formulation comprising mixtures of mixed salts formed between branched-chain α-keto-acids and basic L-amino acids is disclosed which provides optimal nutrition when consumed with a very low protein diet. The composition of this invention contains fewer components than other mixtures utilized heretofore while maintaining like proportions of the essential and semi-essential amino acids. The composition of this invention has improved thermal stability and taste and is useful for the nutritional treatment of chronic renal failure (uremia).
